REGARDS C. O. D. SHIPMENTS

Goods can be sent C. O. D. (with the exception of perishable items, which include plants and cold-storage bulbs; these cannot be sent C. O. D.). No C. O. D. shipments for any kind of goods can be made by express or freight out of town unless a partial remittance accompanies the order. No C. O. D. orders can be accepted where the amount is less than \$1.00.

SHIPPING INSTRUCTIONS

Always state by what method you want goods forwarded, otherwise we will ship according to our best judgment.

PACKING CHARGES

No charge is made for boxes, packing or bags, except for two-bushel seamless sacks, which are returnable for credit at the market price as charged. Any extra charges over actual postage on Parcel Post orders is for extra packing required.

FORWARDING SERVICE

We pay postage charges on all orders for vegetable and flower seeds, provided the order calls for packets, ounces, quarter-pounds and pounds (beans, corn, peas and mixed grass seeds, bulbs, plants and sundries are not included). If these are wanted by mail, remit for postage the amount named in connection with the item, or consult your Post Office for rates.

All Plants, Roots and Bulbs are forwarded by Express (or parcel post when possible) purchaser paying charges, unless otherwise noted.

For those of our customers who prefer to receive such goods by Parcel Post, we will be pleased to forward in this manner such plants as can be sent in this way at the following additional cost, which must be added to the value of each order for Plants, Roots or Bulbs unless otherwise noted.

To all points east of the Mississippi River, 15 per cent. extra to cover postage and packing charges.

To all points west of the Mississippi River, 25 per cent. extra.

Poisons cannot be sent by parcel post.

PLEASE NOTE CHANGES IN POSTAL RATES

On sundries or other merchandise (not including Seeds, Bulbs, Roots or Plants) next following eight (8) ounces in weight, the postage charge is 1½c. for each two (2) ounces or fraction thereof. On seeds, bulbs, roots, plants, sundries, etc., weighing over eight (8) ounces in addition to the regular postage, there is to be added an additional 2c. to each package as a service charge.

If Special Delivery is wanted an additional 10c. is required on packages weighing up to two (2) pounds—15c. on packages weighing more than two (2) pounds and up to ten (10) pounds—20c. on packages weighing more than ten (10) pounds.

If it is desired that a package be given the same dispatch as first class mail it requires an additional 25 cents to the amounts as stated above, which is called a "Special Handling" rate.

If remittance accompanies order, a sufficient amount should be included to cover the extra charges—if ordered to be sent by either of the methods as stated above.

SAFE ARRIVAL.—We guarantee the safe arrival of all goods sent to points within the United States except when shipped to points where there is no express or freight agent, to such points the purchaser must assume any claim for loss or damage.

MICHELL'S SUPERB NAMED HYACINTHS

CULTURAL DIRECTIONS FOR HYACINTHS.—For Outdoors plant in October and November in soil composed of 1-3 sand, 1-3 cow or sheep manure, and 1-3 good garden soil. Plant bulbs so that the top will be 3 or 4 inches below the surface and 6 to 8 inches apart. After the ground has frozen, cover with litter, leaves or coarse manure.

For Pots use same soil as directed above and plant any time from September to December, using a 4 or 5 inch pot for single bulbs, or several bulbs may be planted in a larger pot or bulb pan. After planting, water well and bury the pots outdoors to the depth of 6 inches for eight weeks. After this remove to a cool room.

For Glasses the single varieties are the best. Place the bulb in a glass, which should be filled with water, so it touches the bottom of the bulb, and place the glasses in a cool, dark place. Change the water occasionally. Keep in the dark about 8 weeks, and then remove to a light, cool place.

NAMED EXHIBITION HYACINTHS

A selection of the largest possible bulbs to be obtained and will produce extra large, well filled spikes; we offer them in single varieties only.

FRENCH ROMAN HYACINTHS

French Roman Hyacinths afford a continuous supply of bloom from early winter until late in spring if planted in succession (two weeks apart). They are very fragrant.

Easily grown in pots or pans; if bulbs are potted in August or September, the pots plunged in the open ground for a month, until well rooted, and then brought in the house, they can be had in flower in November or December, and a continuous supply of flowers may be had, by bringing in a few pots or pans at intervals of about 2 weeks. The bulbs should be planted quite close together, a 6-inch pot or pan will be sufficiently large for six bulbs. They are not hardy and are not suitable for outdoor planting.

MICHELL'S SUPERB LILY BULBS

MICHELL'S EASTER LILY BULBS

For Indoor Culture

Cultural Note.—In order to obtain best results, attention to the following directions will assist materially: Upon receiving the bulbs, pot them immediately. Place a handful of well rotted cow manure in the bottom of the pot and place the bulb directly on top, covering it with soil. After watering, place in an outside pit and protect from the direct rays of the sun; cover well with soil, ashes or any other suitable litter. When the bulbs have become thoroughly rooted, bring inside, in a temperature of about 60 degrees; let the plants grow slowly under a bench or some other suitable place until about 6 inches high, then place on top of the bench. About two months before Easter they can be brought into a warmer temperature and gradually forced into flower and height at one time. An occasional application of liquid cow manure, starting about six weeks before flowering time will stimulate the plant wonderfully. Thorough rooting is the most essential point

REGALE LILY

(*Lilium Myrrophyllo*)

Discovered not many years ago in the mountains of China, by Professor Wilson of the Arnold Arboretum of Boston, Mass. It is one of the most beautiful and satisfactory of all garden lilies, perfectly hardy. Of late years some private gardeners have adopted it as a forcing variety and it has more than made good. Color pure waxy white, with a lemon yellow throat, with a trumpet about 6 inches long and when the flower is fully developed it is about 7 inches across. 75c. each; doz., \$8.00 (by P. P., \$8.40); \$60.00 per 100.

LILUM CANDIDUM

(Madonna Lily)

This variety is sometimes called St. Joseph's, Madonna, or Annunciation Lily. One of the most popular and satisfactory of the American garden lilies. Pure waxy white flowers produced on straight stems, bearing anywhere from 10 to 30 blooms of good size and substance, and delightfully fragrant. Effective planting is the result of massing them in clumps or borders. Our bulbs are grown in Northern France, where they have a reputation of growing the finest in the world. To insure absolute success, plant the bulbs as early as possible—September preferred—6 inches deep, imbedded in sand and placed on their side; height, 4 feet; blooms in June.

Giant Bulbs, 22-24 ctm.....	.50	5.00	5.50	32.00

Cultural Directions.—All Hardy Lilies should be planted from 6 to 8 inches deep, the Japan varieties even 12 inches deep; the bulbs should be completely enveloped in sand; no manure should come in contact with the bulbs, but may be placed 4 to 6 inches underneath. All loose petaled bulbs should be planted on their side instead of upright. Cover with leaves or litter during winter. Hardy Lilies are sometimes grown in pots for indoor blooming, in which case they are handled much like the Bermuda Easter Lilies.

If Lily Bulbs are wanted by Parcel Post add 50c. per doz. for postage.

MICHELL'S SUPERB NARCISSUS or DAFFODILS

No garden is complete without the Narcissus or Daffodil, and they really deserve the foremost place among bulbous flowers. They are perfectly hardy and increase from year to year. As a house bulb in winter, they are indispensable and of the easiest culture.

Culture. Owing to the various sizes of the bulbs of different varieties, we cannot advisably give the exact depth to plant, but a good rule to follow is to cover the bulb one and one-half times its own depth. For house culture 3 or 4 bulbs can be put in a 5 inch or 6 inch pan or pot and given the same treatment as Hyacinths.

IMPORTANT NOTICE

PLEASE READ

The Federal Horticultural Board of the United States Department of Agriculture has decided to forbid the importation of all varieties of Narcissus Bulbs for garden bloom, house culture or for forcing under glass after 1925. They claim this action is necessary because of insect pests which the Narcissus Bulbs might introduce.

We have no knowledge of any so called menace to any industry caused by Narcissus Bulbs. Every shipment is certified, by competent foreign entomologists, to be entirely free from all insect pests.

The Department of Agriculture has never granted the flower lover, (you who plant for pleasure or profit) or, we who import Narcissus as a part of our business, a hearing on the subject, as the law requires; they know only one side, their own.

If you want Narcissus in ample supply, write your Senators and Congressmen and protest against the enforcement of the Narcissus Embargo under quarantine No. 37, without a public hearing. There are 100 000.000 (one hundred million) Narcissus Bulbs used in the United States each year.

If you are interested in getting Narcissus Bulbs that will bloom, after 1925, at a reasonable price, write your Senators and Congressmen today.

Respectfully,

MICHELL'S BULB GROWING GUIDE sent free on request

The Tulip is one of the most attractive and popular of spring blooming flowers for garden borders or for bedding. Most of the varieties being equally valuable for pot and pan culture indoors. The named varieties which we offer include some of the most beautiful and recently introduced sorts.

CULTURAL DIRECTIONS.—For Bedding Out The bed should be formed of a compost similar to that recommended for Hyacinths. Plant the bulbs 4 inches apart and about 5 inches deep. They should be covered with litter before freezing weather.

For Pot or Pan Culture.—Plant about 4 bulbs in a 6-inch pot or 5 bulbs in a 6-inch pan, water thoroughly and then remove to the open ground or in a cold frame, covering with coal ashes; after they have rooted thoroughly they should be brought in a moderately cool room and gradually warmer; by bringing in a fresh supply every ten days, they can be had in bloom all winter.

We have affixed in front of the varieties figures denoting the approximate height; also letters to indicate the comparative blooming time. V means very early; E means early; M means midseason.

If wanted by Parcel Post, add 20c. per doz., 50c. per 100, for postage.

MICHELL'S SUPERB DARWIN TULIPS

Darwin Tulips are more largely grown every year and considering the splendid form and exquisite coloring and the immense size of the numerous varieties it is not surprising that they have obtained great popularity. The color plate opposite and on first cover of this catalog can give only a faint idea of their beauty. While they belong to the late blooming or May Flowering class, they are distinct in style of growth; the gigantic flower cups are borne on straight, stout stems which are far above a broad foliage. For massing, bedding or border planting the Darwins are hard to equal. For pot culture they are splendid and are just the ideal Tulip to grow for Easter; the varieties marked with an asterisk (*) are best adapted for the latter purpose. The figures prefixed before the variety denotes the approximate height. Please note there is no yellow colored Darwins and for this the May-flowering Tulip, Inglescombe Yellow may be used.

The figures prefixed before the variety denotes the approximate height.

COTTAGE GARDEN OR LATE TULIPS

They well deserve the popularity they have gained, for no other of the spring flowering bulbs can approach them for brilliancy, beauty and usefulness. For planting in beds, massing in perennial border or planting in clumps they are ideal. They are also very desirable as cut flowers. (All single except where noted.)

MICHELL'S DOUBLE

EARLY TULIPS

Double Tulips are used very extensively for forcing, but are equally valuable for bedding purposes. They remain in flower longer than do the single sorts on account of their substance, although they do not make quite as fine a show. They should not be planted in beds with single tulips, as they do not bloom as early as the single sorts. The figures prefixed before the variety denotes the approximate height.

If wanted by Parcel Post, add 20c. per doz., 50c. per 100, for postage.

Amaryllis, Hybrids of Vittata

AMARYLLIS (Ready in October)

One of the most gorgeous showy house plants, giving splendid satisfaction, not only because of their requiring little care, but of their everlasting nature and tendency to increase.

Cultural Directions.—Place bulbs in live moss, only moderately moist, near window of a warm room. When the first sign of growth appears through the top, get a six-inch pot and be ready to pot them up. The soil to be used should be fairly rich and when the bulb is set, most of it should be above the soil. Water moderately at first, but increase as growth increases, then place in a warm, light room near the window.

ANEMONE (Windflower)

For brilliancy of color and profusion of bloom, none of the Spring flowers surpass the Anemone; they are an excellent decorative plant for house or garden. The foliage is most attractive and above all the plant is crowned with long stemmed beautiful flowers in many colors and shades. If planted outdoors in the fall, they must be well protected with leaves or other litter. They are also well adapted for growing in conservatories or cold frames.

Michell's Giant Named Crocus

CROCUS

One of the earliest flowers to bloom in spring; most effective for borders or beds, also for planting in clumps amongst shrubbery. In lawns, planted in the grass the Crocus are extremely effective.

An effective method of planting is to scatter them over the lawn by digging up a small piece of sod here and there and placing one or two bulbs in each spot, this gives a very pretty effect.

The Giant Flowering varieties are also splendid for flowering in pots, but too severe forcing must not be attempted.

If wanted by Parcel Post, add 10c. per doz., 25c. per 100, for postage.

GIANT NAMED CROCUS

The bulbs of these varieties are very large and each bulb is capable of producing several flowers of large size.

The ideal material in which to grow bulbs, such as Roman Hyacinths, Dutch Hyacinths, Narcissus, Tulips, etc., using vases, crocks, or other receptacles, without drainage. The advantage of this system is that the vases can be placed anywhere about the house, in the drawing room, or dining room, without any fear of water or soil coming through the base of the pots. The bulbs are potted the same way as in ordinary soil, after which they require little attention, except to keep the material moist.

(Ready in December)

This is a favorite Easter plant, rivaling with the lily. If wanted for indoor blooming, pot the roots on arrival, water well and place outdoors for about 6 to 8 weeks. They may be brought in and placed in a moderately warm room, the cooler, without freezing, however, the better. They can be made to flower almost any time by putting in a warmer place.

Gladstone. This popular, large flowering variety is an improvement on all other white varieties. The immense trusses of flowers are snow white, borne on strong, erect stalks and are produced in great abundance. 85c. each; per doz., \$9.00; \$65.00 per 100.

Princess Mary. An extra fine pink variety; a strong vigorous grower and free bloomer; a splendid forcer. 85c. each; per doz., \$9.00; \$65.00 per 100.

Queen Alexandra. A beautiful shade of pink. The plant should be shaded as it comes into bloom in order to bring the flower to full perfection. 85c. each; per doz., \$9.00; \$65.00 per 100.

FOR FALL PLANTING

Many of the most successful Rose growers prefer planting their Roses in the Autumn. We are now booking orders for strong two year old Field-Grown budded plants, which will be ready for shipment just as soon as they are properly ripened by frost, which is usually late in October or early in November. Plants shipped in the dormant state take up but very little room and they may be safely shipped by parcel post. If there is danger of the ground freezing before the arrival of the plants, the space where you wish to plant them may be protected by a covering of leaves or other loose litter. When the plants arrive, plant them so that the bud is covered with at least one inch of soil; then make a mound of earth around the base of the plant about twelve inches high; by doing this all of the buds on the lower end of the branches are covered with soil; this covering protects them from the alternate freezing and thawing, which is injurious. Early in the Spring, before growth starts—but after danger of severe frost is over, this covering of earth should be removed and the plants pruned.

PREPARE NOW FOR BETTER ROSES NEXT YEAR

USE

After years of experimentation, a highly important soil stabilizer has at last been perfected—a combined Fungicide, Insecticide and Fertilizer—used with phenomenal success at the nationally famous Rose Gardens at Wallingford, Pa.

To get better Roses next season, you should use TEROGEN this fall. We recommend dressing the soil with TEROGEN just before covering your Roses for the Winter—WHEN THE PLANTS ARE DORMANT.

TEROGEN will destroy the spores of fungus of most diseases that have fallen to the ground. It will kill the larva of most insects, preventing these pests from hibernating and beginning their renewed attacks in the Spring. It is especially efficacious in destroying the larva of the rose pith borer, rose bugs, Japanese Beetle, if present, aphids, commonly called plant lice, buried in the soil by ants, as well as the ants themselves. TEROGEN is particularly valuable because of its great power in destroying larva and eggs of pests before they become mature and can attack. This action is chiefly due to its marvelous quality as an astringent tanning agent.

TEROGEN also acts as a valuable fertilizer, benefiting the plants the coming season.

Moreover, TEROGEN will supply the means for the foliage to take on the proper amount of Chlorophyll, the green coloring matter, which is of vital importance to healthy plant life.

TEROGEN applied to your rose beds in the Autumn and again in February will prevent the dread disease known as chlorosis, the turning of the foliage to a sickly yellow and consequently dropping off. TEROGEN imparts that deep dark green color to the foliage and gives them that heavy leathery substance which rose lovers are so eager to secure.

This valuable Autumnal Winter Ground Dressing—TEROGEN—will work wonders with your roses. It will supply them with the vital chemical elements most needed. TEROGEN will strengthen your plants, enabling them to ward off disease more readily and impart renewed vigor to them. This once carefully guarded secret is now yours. Give your roses a better start next year. Get your supply of TEROGEN now.

Year by year these old fashioned hardy flowers are gaining favor and deservedly so, as there is not a time during the whole flowering season when some variety is not in bloom; they are especially valuable during the late Summer and Autumn, when there are but few shrubs in bloom. From early April they continue with constant changing variety throughout the Summer and Fall, when they are stopped only by severe freezing weather. Hardy Perennials appear year after year, and as each variety has a fixed time for blooming, a selection can be made that will give flowers to cut from early Spring until late Fall. The most satisfactory arrangement is to plant them in a border, which can be made in front of a hedge, fence or wall, or in the open garden; the soil should be dug to a depth of 18 inches or two feet, pulverizing it thoroughly and working in a liberal quantity of well decomposed stable manure or other fertilizer. The plants should be placed in groups of three or more of one variety together, the taller growing sorts at the back, the medium heights in the center and the dwarf varieties in front; they should also be placed so as to have some flowers in all parts of the border at all times. This can be easily arranged by referring to our descriptions as to the time of flowering. Our book on "Hardy Perennials" is an instructive publication, and it can be had free on request. We offer here only such varieties as can be planted in the autumn.

All plants are forwarded on receipt of order unless instructed to the contrary, and are sent by Express, purchaser paying charges. We can forward small plants or small numbers of plants by Parcel Post, and if wanted sent in this way add 15 per cent. to value of order for postage to points east of the Mississippi River, and 25 per cent. to points west of the Mississippi River.

SPECIAL NOTICE ON GUARANTEE

We spare no effort to supply plants of the best quality in first-class living condition. On account of the many causes beyond our control we regret we cannot guarantee this stock to live and establish itself, as that is usually entirely within the power of the buyer or planter. If customers desire us to guarantee plants and shrubs to live we will assume such guarantee at an advance of 25 per cent. over and above our usual prices, but not otherwise, and such guarantee will expire within 90 days from date of shipment.

MICHELL'S GIANT FLOWERING PEONIES

Next to Roses these are the most popular June flowers, and justly so, for they lend themselves to almost any style of planting, while for the little care required they give a variety of color and wealth of bloom unequaled by any other plant. Their requirements are few; they will succeed in any good garden soil in an open sunny position. Care should be taken, however, to keep all fresh manure away from the roots—if barnyard manure is used it must be thoroughly decomposed—if you are unable to procure this, Bone Meal makes a good fertilizer. Peonies may be planted any time after September 1st until the ground freezes in the Autumn, and in the early Spring until the season is too far advanced; the best time, however, is during September and October, as they make roots during the moist cool weather of the Autumn and consequently carry through the Winter in better shape. The roots should be set so that the top or upper eyes are about two or not more than three inches below the level of the soil; do not set the roots flat, but stand them up. For best results Peonies should be planted from three to four feet apart each way, according to the space at your disposal; the ground around them should be well cultivated at all times and in the Spring after growth starts they should have an abundance of water if the season is at all dry. When cutting the flowers always leave one or two bottom leaves; it is best to leave a few flowers on the plant also, as it is of vital importance that sufficient foliage be left to develop the eyes under the ground for next season's growth. Newly planted roots may not develop a characteristic flower the first season, in fact it is usually not until the third year that perfect flowers true to description will be produced. Peonies are seldom troubled with any disease or insect pests; ants sometimes appear on the buds, coming to gather a sweet gum which the bud exudes while developing; they will do no harm and will disappear when the flower opens.

MICHELL'S SUPERB HARDY PHLOXES

Among hardy herbaceous plants none are more easily grown than these. They are perfectly hardy, succeeding in any garden soil, and produce magnificent spikes of showy and lasting flowers year after year with comparatively little care. They are indispensable for brilliant, bold color effects in mass during the late summer and autumn as it would be difficult to maintain the display of dazzling color without them during July and August, at a time when there is hardly anything else in bloom that can be depended upon.

Bacchante. Tyrian-rose, with a crimson-carmine eye.

Baron von Dedem. Deep pink, suffused orange; immense trusses.

Beacon. Brilliant cherry-red; a new variety and one of the best.

Eclaireur. Brilliant rose-magenta, with lighter halo.

Elizabeth Campbell. Bright salmon-pink, with lighter shadings and dark red eye. 50c. each; per doz., \$5.00.

Eugene Danzanvilliers. Delicate lavender; a very attractive and decorative color; immense flowers. The peer of its color.

Europa. Blush white, with a large deep pink center; the flower truss is very large, while the florets are also of gigantic size.

Jules Sandeau. Dwarf; very large flowering; pure pink; an extra fine variety.

Montagnard. Dark purple claret; large spikes and flowers.

Mrs. Jenkins. The best pure white.

MICHELL'S CHOICE THRIFTY HEDGE PLANTS

Berberis Thunbergii

BERBERIS THUNBERGII (Japanese Barberry)

A good hardy plant of low dense growth. It is a brilliant light green from early spring to winter, it should be regarded as a shrub as it can be planted individually in lawn or border. The slender branches are prickly, with small thorns, and tend to make a defensive hedge that few animals will attempt to penetrate. In autumn the foliage is a bright crimson; when it falls a profusion of scarlet berries, which remain throughout the winter, are revealed on the branches.

California Privet

CALIFORNIA PRIVET

Unlike a fence, which needs painting, repainting, etc., and then never looks well, this hedge is no further expense after planted, and it adds dignity and charm to any home. Privet is somewhat of an Evergreen nature and looks attractive until real winter sets in. Plants should be set 12 inches apart in double rows, in zig-zag fashion, so that the plants are diagonally opposite each other; this practically places them 6 inches apart, which is desirable to get a quick, dense growth. Plant from October 15th till the ground freezes, and from March 15th to May 15th.

GOLDEN OR VARIEGATED PRIVET

Like the California variety, but each leaf is margined and blotched golden yellow, giving it, from a distance, a striking appearance. Bushy Plants, 75c. each; doz., \$7.50.

Evergreens offer a wide variety and brilliant diversity of color, every shade of green and blue foliage; then there are the rich, golden tints, the soft silvery grays and those varieties with the dainty white-tipped leaves.

Evergreens are much desired for specimen lawn trees; they are also extensively used for massing, shelter belts, screens and hedges. The taller varieties form perfect backgrounds for the showy flowering shrubs and trees of early spring, the berries of autumn, the bright bark and twigs of winter, or the light green, golden or silver-blue growth of smaller evergreens.

Blackberry "Eldorado"

Currants

Goosberries

Every garden should have some space reserved for small fruits. None bought in the market can compare with those picked fresh by yourself when you want them. Any surplus that cannot be consumed may be put up for winter use.

PLEASE NOTE.—The following states forbid the shipment of Gooseberries and Currants within their boundary, owing to their quarantines against the White Pine Blister Rust. We are therefore unable to accept orders for these plants for shipment into these states: California, Colorado, Delaware, Georgia, Idaho, Kansas, Maine, Maryland, Massachusetts, Minnesota, Montana, Nebraska, Nevada, New Hampshire, North Carolina, Oregon, South Carolina, South Dakota, Tennessee, Utah, Washington, West Virginia and Wisconsin.

BLACKBERRIES (Extra Strong Plants)

Blackberries thrive most anywhere. The plants are subject at times to attacks of rust, particularly during prolonged wet spells in summer. A spraying, especially underneath the foliage, with copper solution, usually arrests this. However, if the disease spreads too much, it is best to dig up the bushes, burn them and plant new ones in another part of the garden. If they are sprayed before being affected it is the best plan.

Eldorado. A very vigorous grower, free from mildew or rust; enormously productive; fruit large, excellent quality and without core.

Mersereau. Remarkably strong grower. An enormous producer of extra size berries, which are brilliant black, and retain their color under all conditions; very sweet and without core. Unsurpassed as a shipper and keeper.

Ward. An extra strong grower; produces an enormous crop of extra large, glossy black berries, which are rich, sweet and tender and with no hard core.

Price of Blackberries, 6 for 75c. (by parcel post, 85c.); \$1.00 per doz. (by parcel post, \$1.25); per 100, \$7.00.

CURRENTS (Extra Strong Plants)

Currants like good, rich soil. They are particularly susceptible to scale, and steps should be taken to keep them free from this by liberal spraying, when the bushes are dormant.

Red Dutch. An old and well-known standard variety; clusters average about three inches long; berries medium in size, dark red.

Price, strong 2-year old, 3 for \$1.00 (by parcel post, \$1.15); per doz., \$3.50 (by parcel post, \$3.85); \$22.00 per 100.

GOOSEBERRIES (Extra Strong Plants)

Gooseberries should be cultivated during the growing season and fertilized with manure in the early spring or late fall. They will repay you for this trouble with an extra big crop.

Downing. Medium to large; whitish green; flesh soft and juicy.

Red Jacket. Berries medium; color, pale red, tender and good.

A wonderful cropper, with clean, healthy foliage.

Price, 3 for \$1.00 (by parcel post, \$1.15); doz., \$3.00 (by parcel post, \$3.25); \$20.00 per 100.

SPECIAL NOTICE ON GUARANTEE

We spare no effort to supply "small fruit" bushes of the best quality in first-class living condition. On account of the many causes beyond our control we regret we cannot guarantee this stock to live and establish itself, as that is usually entirely within the power of the buyer or grower. If customers desire us to guarantee these and trees and shrubs to live we will assume such guarantee at an advance of 25 per cent. over and above our usual prices, but not otherwise, and such guarantee will expire within 90 days from date of shipping.

GRAPE VINES

A few of these plants in the garden, after several years will yield abundant crops, and they last for years with little attention except pruning and spraying.

Caco. The most delicious of all Grapes and perfectly hardy; it has been pronounced by America's most expert grape growers to equal in high quality and melting texture the finest varieties grown under glass. When one considers the price of the greenhouse product and realizes that the wonderful Caco can be grown in the back yard, almost without attention, the force of the above statement is apparent. The large berry is wine-red. Bunch of good size, compact and of good form. Ripens in ten days to two weeks in advance of Concord; rich in sugar, excellent in flavor. Vine a very strong, vigorous grower, healthy and prolific. This is a very fine variety and is easily worth the slight advance in price over the older varieties. \$1.00 each (by parcel post, \$1.10); doz., \$10.00 (by parcel post, \$10.50).

Campbell's Early. A valuable and delicious grape; vine very strong, hardy and vigorous, with thick, healthy foliage; berries large, black, with light purplish bloom; skin thin; few and small seeds; flavor rich and delicious.

Catawba. Delicious flavor; medium size, red berry.

Champagne. A sterling variety of great merit. Color a coppery red. Berries very large. Immense producer. Seasons in which other varieties did not fruit, this variety stood out bearing an immense crop. Very strong grower, fifteen to twenty feet or more a season being common. Has never been known to winter kill. \$1.00 each (by parcel post, \$1.10); doz., \$10.00 (by parcel post, \$10.50).

Concord. The well-known standard purple variety; succeeds wherever grapes will grow.

Ives. One of the most prolific bearers; medium size; color, purplish black.

Moore's Diamond. A strong healthy grower; hardy and productive; color, white; berries large, flesh tender, juicy, but with little pulp; ripens before Concord.

Niagara. An unusually strong grower; bunches very large and compact; berries large, light greenish-white, semi-transparent; has very little pulp and is sweet to the center.

Please Note.—We have reduced the variety of Grape Vines offered, retaining the best in varieties which cover the different colors.

Shipping Seasons for small fruits are from October till freezing weather and from March 25th to May 15th.

RASPBERRIES (Extra Strong Plants)

Raspberries should be carefully staked, to get large crops. We also recommend that well-rotted manure or other suitable fertilizer be dug around the bushes, either in the fall or early spring.

Cumberland (Blackcap). The largest raspberry known. Selected specimens measure an inch in diameter; immensely productive.

Cuthbert. Berries very large, measuring 3 inches around; conical, rich crimson; one of the old-time favorites.

King. In this extra early variety are united earliness, bright color, firmness and excellent quality of its berries with vigorous growth, productiveness and hardness of cane. Its crimson berries are exceedingly bright in color and firm to endure long shipment.

Ranere Everbearing. The most popular Raspberry in cultivation, bearing continually from July until well into November. Its main crop is produced in the earlier period, but substantial quantities may be harvested almost every day until sharp frosts appear. The fruit is of good size and of excellent flavor, in fact there is no good quality any of the regular varieties of raspberries possess that is lacking in Ranere; a few dozen bushes will supply the average family with sufficient for table use and a surplus for canning, the color is a brilliant red.

Welch. So sweet and rich in flavor, this was at one time offered as "Honey Raspberry." A mid-season variety with berries of extra large size, good, bright crimson color and honey sweetness, melting and luscious. It is not firm enough to ship well a long distance. The canes are vigorous, hardy and productive. Superb for the home garden.

MICHELL'S
SUPERIOR
MUSHROOM SPAWN

PURE SPORE CULTURE SPAWN

The growing of Mushrooms is rapidly increasing, and the demand for them has reached immense proportions. A fine crop of mushrooms can be secured with very little labor or expense, provided a suitable location can be obtained. Cellars, greenhouses and sheds can be used for their culture. We are now offering our customers spawn that is made in quart milk jars under absolutely sterile conditions. The bottle and materials are sterilized under steam pressure of twelve lbs., so that every mould, weed seed or insect is destroyed and each bottle contains nothing but the pure spawn. Every particle is full run, covered with spawn grown direct from the spores. One carton of the spawn equals 5 bricks of ordinary spawn and is sufficient to spawn about 40 square feet. The sterile spawn is dried thoroughly and each piece wrapped in tissue paper, which contains full instructions, not only as to how the spawn should be used, but full particulars about growing mushrooms. Any one can order spawn and with it get the necessary knowledge to make growing entirely successful.

Per carton \$1.00 | 25 cartons \$21.25
12 cartons 10.75 | 60 cartons 48.00

If wanted by P. P., allow 10c. per carton for postage.

PURE CULTURE BRICK SPAWN

A crop is produced with good spawn, and a little care and patience in about 4 to 6 weeks, and continues bearing about two months. New beds can be started at intervals which will give a supply the entire season. The first planting can be made in July, the last in March. Summer spawned beds do not bear well. Ask for our Free Booklet on Mushroom Culture. One Brick will spawn 8 to 10 sq. ft.

Direct No. 8. Cream White. For use from April to October.
Direct No. 9. Pure White. For use from October to April.
 Per brick \$0.35 | Per 10 bricks \$2.75
 Per 5 bricks 1.50 | Per 25 bricks 6.50
 Per 50 bricks \$12.50

If wanted by P. P., allow for postage at the rate of 10c per brick.

RHUBARB ROOTS (Ready in October)

Rhubarb is as readily obtainable in winter as in spring. The clumps, which should be at least four years old, should be planted in good garden soil in a cool cellar, preferably as dark as possible. Where practicable, a barrel or a peach basket, either without a bottom, should be placed over each root to draw the top up. Does extra well under greenhouse benches. Place the roots as close as possible. When spring approaches and rhubarb is obtainable outdoors the clumps may be planted out for use another season. The roots should always be subjected to a slight frost before planting indoors.

MICHELL'S RELIABLE GRASS SEEDS

Our grass seeds are rigidly tested for purity and germination at the growing point, in the laboratories of the United States Department of Agriculture and by ourselves, and will be found of highest quality. We make special formulas to suit various soils, climatic and local conditions.

Quantity to Sow for Lawns. On a small scale a quart will usually seed a space of 10 x 10 feet though twice that quantity is better; 6 to 8 or 10 bushels of 20 lbs. per bushel on new ground without grass, is the proper quantity per acre; 1 peck is needed for a space of 1000 square feet; $\frac{1}{2}$ bushel for a space 2000 square feet; 1 bushel for a space 4000 square feet or say 40 x 100 feet. For Putting Greens we advise 100 lbs. of seed for greens 100 x 100 feet. For Fairways, 8 to 10 bushels per acre. For Pasture and Hay Fields, 6 to 8 bushels per acre, based on a 20 pound bushel.

If Mixed Grass Seeds are wanted by parcel post, add for postage as follows: 7c. for 1 pt.; 10c. for 1 qt.; 15c. for 2 qts.; 20c. for 4 qts.; 25c. per peck; 45c. per $\frac{1}{2}$ bu.; 75c. per bu.

Crimson Clover

CLOVERS

Alfalfa or Lucerne (*Medicago Sativa*). Non-irrigated Western Grown Seed. This is sown during May, August and September. Sow not less than $\frac{1}{2}$ bushel (30 lbs.) per acre, preferably with no other crop. 40c. per lb. (by parcel post, 50c.).

Alfalfa (Grimm Strain). Claimed to be hardy in any and all regions; a heavy yielder and of deeper rooting ability. It requires about 10 lbs. of Grimm Alfalfa to properly seed an acre on account of its great root system and spreading habit. 45c. per lb. (by parcel post, 55c.).

Alsike or Swedish Clover (*Trifolium Hybridum*). One of the best for mixing with timothy; perfectly hardy in every climate or soil condition; grows from 1 to 2 feet high. Sown early in the spring or late summer and early autumn. Sow 10 to 15 lbs. per acre alone or 8 lbs. per acre with timothy. 35c. per lb. (by parcel post, 45c.).

Bokhara or Sweet Clover (*Melilotus Alba*). While extensively used as a bee food, this is a valuable variety for soiling (green manure). Grows from 3 to 5 feet high, thriving on almost any kind of soil. We handle only the true white-flowered variety. Sow 15 lbs. per acre in early spring alone, or 10 lbs. per acre with other crops. 30c. per lb. (by parcel post, 40c.).

Crimson Clover (*Trifolium Incarnatum*). This is used principally for soiling or green manuring, for which purposes it is highly valuable. If desired for feed, cut it just before it flowers. When desired for green manure, it should be allowed to mature; its height is from 1 to 2 feet. Sow any time from April to October, 20 lbs. to the acre. 25c. per lb. (by parcel post, 35c.).

Hubam (*Sweet Clover*). One of the best fertilizing plants, and a wonderful hay and pasture crop. Sow 12 pounds per acre broadcast or 3 pounds in cultivated rows early in the spring. Scarified seed, 50c. per lb. (by parcel post, 60c.); 5 lbs., \$2.40 (by parcel post, \$2.65); \$4.50 per 10 lbs. (by parcel post, \$4.85); 25 lbs., \$10.00; \$37.50 per 100 lbs.

Mammoth Red Clover (*Trifolium Pratense Perenne*). This differs from the "Medium," being of a ranker growth and yielding more fodder per acre. It ripens somewhat later and is more hardy, lasting several seasons longer than the medium red clover. Sow in early spring or in July and August, using 20 lbs. per acre alone, or with other crops 10 lbs. per acre. 55c. per lb. (by parcel post, 65c.).

Red Clover, Medium (*Trifolium Pratense*). Used principally for hay purposes. Height from 18 inches to $2\frac{1}{2}$ feet. Sow early in the spring or in late summer—July and August; if alone, 20 lbs. per acre; if with other crops, 10 lbs. per acre. 50c. per lb. (by parcel post, 60c.).

Prices for quantities of Clover larger than 5 lbs., will be quoted on request.

CLOVERS—(Continued)

White Dutch or Lawn Clover (*Trifolium Repens*). Valuable for pasturage; it succeeds where other clovers and grasses fail, and it seldom dies out. Sow 10 to 12 lbs. per acre if alone or 5 lbs. if sown on old turf or with other crops. Per pkt., 5c.; 10c. per oz.; $\frac{1}{4}$ lb., 25c.; 45c. per $\frac{1}{2}$ lb. (by parcel post, 50c.); 1 lb., 85c. (by parcel post, 95c.); \$4.00 per 5 lbs. (by parcel post, \$4.25); 10 lbs., \$7.75 (by parcel post, \$8.10); \$45.00 per bu. of 60 lbs.; per 100 lbs., \$75.00. Prices on White Clover subject to change.

RAPE

Dwarf Essex. An excellent green food for sheep and hogs; can be pastured 8 weeks after sowing. Sow 6 lbs. per acre broadcast or in drills from April 1st to October 1st. It produces enormous crops and is ideal green manure. 20c. per lb. (by parcel post, 30c.); larger quantity, price upon application.

WINTER RYE

Pennsylvania White. This makes a fine winter cover crop, being usually sown in the autumn as late as November, making a very fine yield of long, stiff straw. Winter rye will not mature if sown in spring. 56 lbs. per bu. Sow $1\frac{1}{2}$ bushels per acre.

Rosen. An improvement on the above.

Price, either of above, 20c. per qt. (by parcel post, 30c.); larger quantity, price upon application.

TIMOTHY SEED

For sowing among wheat as a second year hay crop, or for sowing alone for a first year hay crop, this is extensively used. We aim to sell the purest and highest germinating quality. 45 lbs. per bushel. 20c. per lb. (by parcel post, 30c.); larger quantity, price upon application.

Winter Vetch

WINTER VETCH (*Vicia Villosa*)

Our stock of this is the true type, which will absolutely live throughout the winter. There is also an English strain on the market which is not hardy in the Northern section of the United States, and buyers should beware when buying that they procure the right article, which is a small round black seed. It is far superior to Crimson Clover, as it never winter-kills. Sow from August 1st to October 1st, the earlier the better, broadcast, 1 bushel per acre, to which we suggest adding a bushel of winter rye or wheat. In the spring it can be plowed under as green manure, or when in flower, cut for hay. All stock relish it keenly. 25c. per lb. (by parcel post, 35c.); larger quantity, price upon application.

See page 69 for
our Special Wheat
Fertilizer.

FOUR-ROWED FULTZ (Beardless)

Four-rowed Fultz has a tendency to produce spikelets composed of four grains of wheat arranged in a row close together. Although the heads are only of medium length, in most cases they contain more wheat than heads of other varieties that are much longer. Four-rowed Fultz is **extremely early**. The berry is of medium size, hard and red in color. Chaff is white. Straw is of medium length, strong and stiff. On rich soils, Four-rowed Fultz will give straw of great length; will stool out wonderfully, making a thick growth.

This variety has numerous records of yield of 40 bushels per acre on average land. On select land as much as 50 bushels per acre has been harvested. Sow 1½ to 2 bushels per acre.

LANCASTER-FULCASTER (Bearded)

A reselection from the old "Fulcaster" and one of the purest wheats now offered. There are few other varieties that will do quite as well on soils of average quality. Farmers who are not able to raise even fair crops on rather thin soils should sow "Lancaster-Fulcaster." Even under adverse conditions this variety will produce a satisfactory crop of straw and a surprising crop of grain. The grain is of finest quality, a genuine long berry, dark red and hard. The chaff is white and the straw is long and stiff. Lancaster-Fulcaster will carry through extreme winters; will also withstand attacks of insect pests and disease better than any other variety. Sow 1½ to 2 bushels per acre.

LEAP'S PROLIFIC (Beardless)

A most prolific variety indeed, and may be relied upon to give big crops. It stools out strongly and roots deeply. The grain is large, dark red and of the best milling qualities. The heads are large, the chaff is beautiful white and is without beards. "Leap's Prolific" is one of the earliest to ripen and we recommend it as an all around good variety. Sow 1½ bushels per acre.

"MIRACLE" (Bearded)

This valuable wheat was introduced by us in the vicinity of Philadelphia in 1911. It produces a magnificent, heavy growth of straw, which is very stiff and erect. The head is bearded and contains well-shaped, red grains of a semi-hard nature of excellent milling qualities. **It is a tremendous stooler, one grain producing as many as 25 stalks with often 45 grains to the head or stalk.** It is readily seen that this wheat should produce on average conditions an enormous crop, its usual rating being anywhere from 40 to 50 bushels per acre under average conditions. The introducer impressed upon us very forcibly **not to recommend the sowing of more than one bushel per acre**, as if seeded heavier it is liable to choke itself, on account of its free stooling habit. It is early to mature and produces straw often 5 feet high.

PENNSYLVANIA 44 (Bearded)

A new variety originating at the Pennsylvania Agricultural Experiment Station and developed from the Fulcaster. Grains red, purple straw, white chaff. It is a few inches taller than Fulcaster, and with stiffer straw. This variety has yielded an average of 35 bushels per acre for the last 10 years. Sow 1½ to 2 bushels per acre.

RED WAVE (Beardless)

A very popular variety, succeeding in all kinds of soil and has been especially successful in lands not too rich in lime. Upon sandy, gravelly soil Red Wave is especially suited. This variety is a heavy producer; heads are extremely long, with grains closely set; on good rich soil this variety has yielded 40 to 45 bushels per acre. It takes a little longer for this variety to mature than the earliest varieties. The straw is long and withstands storms remarkably well. Grains large and dark red and produces flour of good quality. This is truly a worthy variety, the result of a cross of Red Clawson and an unnamed cross-breed of Russian parentage.

Prices of Seed Wheat fluctuate constantly and will be quoted on application.

MICHELL'S RELIABLE POULTRY SUPPLIES

Prairie State Incubator

PRAIRIE STATE INCUBATORS

The Prairie State Incubators have made good since the day of their introduction, which is many years ago; the improvements that have been added are the results of developments which experience has proven to be both practical and successful.

In the building, design and construction of the Prairie State Incubator, every known factor to the present time has been taken into consideration. All Prairie State Incubators are equipped with nurseries.

In shipping the heaters are crated separately, as their design and size make it more practical; also it does away with the possibility of the heater becoming injured in transit.

There are also many other improvements in the Prairie State Incubator that a study of the Prairie State Catalog and a close inspection of the machine itself, if possible, will best reveal.

The Prairie State has the diffusive air circulation system and sand tray moisture feature and is as faultless as it is possible to make incubators.

PRAIRIE STATE JR. COAL STOVE BROODER No. 1

The Junior is the result of an effort to put a moderately priced equipment in the hands of poultrymen who want a good Stove Brooder. It is compact in design, occupies small floor space and

is adaptable to every possible brooding condition. It is fitted not only for permanent installation, but is also portable, so that being installed in one house, after the brooding stage is passed it may be picked up and carried all intact to another house to begin with another flock. It is durable, substantial and low in cost of operation. The stove is solid cast iron, resting directly on its base without legs, there being no hot place under the stove possible for the chicks to reach. Designed for hard coal, but will burn soft coal also. The

canopy is of galvanized sheet steel, hinged in center, giving ready access to stove when coaling. Regulator is powerful, sensitive, triple control, of wafer type, regulating temperature to a fraction of a degree, with all working parts under canopy and so protected. The device handles flocks of 250 to 1000 or more safely and is adaptable to permanent or portable brood houses. This brooder can be operated at a cost of from 7 to 14 cents per day for coal. Price, complete with equipment, \$25.00.

PRAIRIE STATE JR. No. 0 COAL STOVE BROODER

The construction of this is similar to the Junior Coal Stove Brooder No. 1, excepting that it has a new design double control regulator instead of the triple control type. Capacity, 200 to 700 Chicks. Price, \$20.00.

PRAIRIE STATE JR. PORTABLE HOVER

Combines all the essentials of the larger brooders in a style and size suited to the small producer or the fancier who wishes to raise small lots separately. While its size and capacity are equal to any other lamp brooder, yet it is light in weight and may be instantly moved from place to place. Heat is furnished by the Standard Prairie State Lamp set in the center of the hover, the warm, fresh air being diffused by the radiator under the galvanized steel hover top, down upon the chicks. Heat is controlled by the accurate regulator, and ventilation is assured by a perfect system of air flues. Curtain is of cotton duck; top of hover is insulated with mineral wool. Provides ample nursery space for 50 chicks. Price, \$10.00.

LITTLE PUTNAM STOVE

This is used under the drinking vessels of the poultry house to keep the water from freezing in the coldest winter weather. The stove is nine inches in diameter and four inches high; made of galvanized iron and equipped with a burner which embodies an entirely new principle in oil combustion. Combustion is complete and perfect, doubling the heat value of oil. The oil tank holds three pints of oil and burns three to four weeks without refilling or any other attention; the wick never needs trimming. Price, \$2.50 (by P. P., \$2.65).

COLLINS OAT SPROUTER

The most practical, quickest growing, perpetual, sectional and fireless Oat Sprouter. The Collins Sprouter is made in units, light individual pans, one pan for each day of the week and a drip pan at the bottom.

The production of eggs and the proper development of growing stock depend upon some form of "green stuff," something that is growing, that has life in it. The feeding of sprouted oats is no longer an experiment. Experience has proven time and again its value as a food for stimulating egg production. Oats sprouted in the right manner furnish food most nearly akin to the fresh green growth of spring time, the prolific laying time of the year.

SEMESAN

Semesan is one of the most remarkable chemicals developed by modern science. It will completely kill or control the many diseases borne on the surface coats of even the finest selected seeds and yet at the same time in no way injure the delicate germ life of the seeds treated. In fact, Semesan stimulates seeds and bulbs to a growth, vigor and fruition that far exceeds the capabilities of their progenitors.

Every farmer, trucker, florist and home-gardener should disinfect his seeds with Semesan before planting, to rid them of their surface-borne diseases, to increase and accelerate their germination, to improve seedling growth, to produce better plant stands and to secure earlier maturity as well as both better quality and quantity of finished crops.

Of all the suggested remedies for the malignant grass disease called "Brown Patch," Semesan alone has been successful, spectacularly so, and is now used throughout the country both to prevent and cure attacks of this parasite on golf greens, turf tennis courts, baseball diamonds and estate lawns.

Treatments with Semesan are simple and effective. Either dust the seeds or bulbs with one-half to one ounce of powdered Semesan for each 15 pounds of seeds, or immerse them in a 0.25% concentration of liquid Semesan for 15 minutes to two hours. This solution is made by stirring one ounce of Semesan with just enough water to make a paste and then diluting the paste with three gallons of water.

Price, 30c. per 2 oz. bottle; 4 oz. bottle, \$1.00; \$1.60 per 8 oz. can; 1 lb. can, \$2.75; \$13.00 per 5 lb. can; 25 lb. can, \$62.50.

F & I FERTILIZER AND INSECTICIDE

AS A FERTILIZER

"F & I" is rich in plant foods needed to promote healthy growth. It has 6 to 8 times the fertilizing value of stable manure and is more economical to use. It is more desirable than chemical fertilizers because it will not "burn" the plants. It has no objectionable odor and is free from weed seeds.

The fertilizing elements in "F & I" are in a readily available form and consequently the plants begin to show the benefits of the preparation immediately after application. Because of the rather coarse texture of the compound, its action is extended over a period, giving continuous fertilization to the plants.

Analysis as a Fertilizer: Nitrogen, 2.07%; Ammonia Equivalent, 2.50%; Phosphoric Acid, 50%; Potash, 3.00%.

A Mercuric Disinfectant

AS AN INSECTICIDE

"F & I" is an effective insecticide that destroys such pests as rose midge, strawberry beetle, root aphid, etc., and controls green fly, thrip, aphid and all soft-bodied sucking insects. It kills the larvae and prevents the insects from reaching maturity, thus cutting down the need for frequent fumigating. The strong insecticidal action of "F & I" is due to its high nicotine content and the available condition of the nicotine. There is no other preparation on the market that is so effective in combatting the ravages of plant insects.

Analysis as an Insecticide: Nicotine, 1%; Inert Ingredients, 99%.

Price, 5 lbs., 25c.; 45c. per 10 lbs.; 25 lbs., \$1.00; \$1.75 per 50 lbs.; 100 lbs., \$3.00; \$13.00 per 500 lbs.

MICHELL'S RUSTIC AND ORNAMENTAL BIRD HOUSES

Comparatively few of us recognize the great economic value of birds. Particularly the blue birds, house wrens and martins are very easily domesticated. Their favorite nesting sites are bird houses made for their use which may be placed about in the garden and farm or in orchards. As rent, these grateful birds pay amply, destroying millions of insects annually. If you put up bird houses in the autumn or before the birds arrive in the spring you may be able to keep birds with you all winter if you provide them with shelter and food.

SQUIRREL HOUSE

The trouble with ordinary squirrel houses is, that all sorts of birds will try to build in them, particularly the sparrow. This house is arranged so that no birds will try to use it, the hole is on the bottom. A narrow passage leads up to another opening leading over into a snug room for the squirrel's storehouse and nesting place. Put high up in crotch of a tree. Price, \$5.50 (by P. P., \$6.00).

SPARROW TRAP

(Wire)

We have tried this out and found it to be the best trap made. Scatter a little cracked corn and set trap right over it. You'll be surprised at the catch. \$6.00 each (by P. P., \$6.50).
